

Abstract of the Disclosure

A kit for assembling putters of variable selected designs which includes a plurality of putter heads of varying designs, each putter head being formed with a bore in its upper surface. Also, including a plurality of hosels of varying designs, each hosel having a foot including a projection at a first end and a receptacle at a second end. Each projection being sized to fit into each of the bores in the putter heads. Further including a plurality of shafts of a plurality of lengths and flexes, each of which is sized at one end to fit into the hosel receptacles. The kit provides the components for assembling putters of selected and differing designs by choosing a specific designed putter head from the plurality of putter heads, choosing a specific designed hosel from the plurality of hosels, choosing a shaft of specific length and flexibility from the plurality of shafts and securing them together in the appropriate manner.
